

Introduction of New Club Sponsors!!

Who are we?

Some of you may have seen us. We are the poms that were often sitting in the bar last year, laptops spread out everywhere whilst we “worked” and admired the amazing view. It really is the best office we have ever had!

Trevor and I became social members last year, quite honestly the primary reason was for the beautiful place to work from during school hours. But having spoken to so many friendly faces we truly felt welcomed and that we belonged.

Neither of us have ever stepped foot on a yacht, though several of you beautiful people have offered to take us out to test our legs.

As time has progressed, so have our businesses, a his and hers set of trading names held under the same umbrella company.

Deans MS PTY Ltd

Deans is the umbrella company. It was registered in Dec 2016 and is named after our UK operation Deans Management Services which was founded in 2011, which was named after the cat...but that’s a story for another time!

It was our intention when we moved to Australia in 2017 that we replicate our UK business over here straight away, but with 3 years of visa fun and games our hands have been tied...until now!

Deans, purely due to Trevor’s knowledge and experienced is a globally sought after partner in the world of plastics and material handling equipment. Having attended the World Food Expo in Dubai, projected managed & redesign a crate and pallet for the worlds largest dairy, and worked with the UK’s top 3 bakeries what he doesn’t know about plastic isn’t worth knowing!

Tranksit

Whilst Deans specialises in designing the solution to your plastic requirements, Transkit provides the immediate, in stock solution. These elements, though complimentary, do have completely different natures and personalities, so the decision was made to give each it's own identity.

Transkit has already launched it's first unique and innovative Australian product being the Oz dolly, a completely recyclable plastic wheeled platform to move the typical Oz (tip top) tray around at a fraction of the cost of comparable units and is already developing the next product to debut. (I'll give you a clue they come frosted and glazed)

We have brought our own range of products over from the UK to inject some variety and "identifiable factors" into the market. Lets just say it's easier to spot our trays being used by someone who did not buy them than it is a tip top tray!

Trevor's experience and knowledge in the plastics industry could look to move Australia on a decade! If you need any plastic items, or have an ideas that you want to explore, have a chat with him, it'll only cost you a VB!

Light n Crafty

Ever felt guilty for throwing yet another bottle in to the recycling and wished you could reuse it some how? (even if its so that the neighbours don't hear yet another bottle clatter in to the bin)

Have you ever seen the beautiful bottle lamps on Pintrest, Instagram, or in style magazines and thought WOW that's a great idea! I should do that!!! You pin the post to a board, and excitedly click on the link. This link is surely going to be the magic gateway to a new you! You are about to find your inner artist and create the thing of beauty that you can plaster all over Facebook and Instagram so that EVERYONE can marvel at your amazing creation! The post is telling you, this is going to be easy! A walk in the park! But then you see the word that brings dread to your heart and ice to your veins. Things you will need. A GLASS drill bit. Not just any drill bit....you need a glass one!! You are fairly certain that you don't have one of those in the tool box and you're pretty sure you recall that these ones have a diamond tip!?!? I'll be honest, the first thing that went through my mind was..."I wonder if cubic zirconic ones are available and a bit cheaper???" This work of art that you completely believed you were about to create is now more likely to shower you in glass than compliments and the confetti cannon....no?? just me??

Light n Crafty in all honesty was founded for me as I really wanted that bottle lamp, but then I thought, there must be others out there who want a bottle lamp. Others who want to make that bottle of Champagne they are buying for that wedding a little more special and unique. Others who want to reuse and upcycle their glass but feel that it's all just a bit too advanced/scary or simply a pain to gather all the items on the "you will need" list!

Light n Crafty provide all you need kits that are simple enough for a novice, but have the finished quality of a pro! I have already extending my range of products and will be running workshops from the yacht club from July.
